✓ Other Observations/Photos:

Observations

Only one reef ball could be found and it was 75 percent submerged in the sand bottom. It appears that all 10 reef balls experienced scouring and than burying. The other 9 reef balls have completely buried out of sight. Observation of this sight should continue to watch for excavation and re-emergence of the reef balls over time. Additionally, future reef construction should consider designs of structures that will be less susceptible to scouring and burying effects.
