Observations

Using the vessel's depth sounder, the published site was searched for evidence of reef materials and none detected. After circling the area, 4 reef balls were found approximately 100-170 feet East of the published lat/lon. Bob had some old lat/lons loaded in the GPS. The 4 reef balls found may have formerly known as Blackfin reef. It's suspected that early typing/recording discrepancies may be the cause for errors. It's also possible that historic Loran nav problems may have contributed to malposition errors. More searches on the reef are required to locate other reef balls not found in attempt to define the reef and establish a better published location. RLC
